Basis `Higgs-Warsaw up` (EFT SMEFT)

This is a mixture between the Higgs basis as defined e.g. in arXiv:1610.07922 and the Warsaw up basis. All bosonic operators involving at least one Higgs field as well as the operators of type $\psi^2\phi^2 D$ are taken from the Higgs basis (with dimensionful Wilson coefficients rather than normalizing by $1/v^2$), while all other operators (in particular $\psi^2\phi^3$ and four-fermion operators) are defined as in the Warsaw up basis.

Sectors

The effective Lagrangian is defined as

$$\mathcal{L}_{\text{eff}} = -\mathcal{H}_{\text{eff}} = \sum_{O_i = O_i^\dagger} C_i\, O_i + \sum_{O_i \neq O_i^\dagger} \left(C_i\, O_i + C_i^*\, O_i^\dagger \right).$$

`dB=dL=0`
